

MASTER IN LAW AND TECHNOLOGY

NEW
MASTER

The Master in Law and Technology is part of NOVA's strategy to be at the vanguard of legal education, to train lawyers for the Economy 4.0. The course is designed to prepare lawyers for the most advanced areas of technology, from data protection and management, digital contracts and cybersecurity, to the challenges of artificial intelligence and programming for lawyers. The course also has content related to business and entrepreneurship, including Starter's Academy and Startup Lifecycle, as well as contents of corporate management and tax framework.

GOALS

To train lawyers for the Digital Economy, with knowledge of what is the technological reality, its legal framework, and the economic impact of innovation. Lawyers prepared to support technology companies in the various aspects of their activity, to advise on regulation of innovative activities or to develop cutting-edge business structures in the technological areas. In a word, to train lawyers who know what innovation is.

WHO IS IT FOR

Graduates in Law or in related fields, professionals who wish to deepen their knowledge in technological matters in their legal aspect. Innovative and entrepreneurial students.

**Head of Practice Partner Information,
Communication & Technology
Viera de Almeida**

In an era of enormous digital and technological transformation that has an impact on all sectors of the economy on an international scale, it is crucial to know the legal issues that arise, at the speed at which they arise. Through this Master's Degree, knowing how to look to the future, benefiting from the acquired knowledge will allow to have professionals capable of responding to the challenges of the clients in a robust, innovative and technically advanced way.

COORDINATION

Jorge Morais Carvalho

Studying at NOVA School of Law is to benefit from a unique learning environment, distinguished by the close proximity between the student and the professor and by pedagogical innovation. In this context, the Master in Law and Technology, fully taught in English, aims to prepare the lawyer to be a professional of excellence in a digital and international society and to make a difference in a number of environments, whether a large company, one of the leading law firms or her or his own startup. Programming, Law and Technology, Digital Contracts, Data Protection and Management Law, Cybersecurity, and much, much more.
